Press Release: Vermeer
Receives Two Additional Small
Business Innovation Research
Phase II Awards and One
Other Transaction Authority
(OTA) from the US Air Force

Vermeer

Brian Stream

Nov 2, 2021

Vermeer will enable an entirely new era of immersive visualization and command and control on the battlefield.

NEW YORK, NY - Vermeer, a NYC based company that builds a mixed reality and artificial intelligence enabled mission planning and visualization tool, announces the award of two additional Direct to Phase II Small Business Innovation Research (SBIR) contracts and one OTA sponsored by the Air Force Research Laboratory (AFRL). These contracts will allow Vermeer to enhance and integrate its capabilities in support of cutting-edge autonomy, image processing and localization techniques for the Air Force Research Lab (AFRL), Air Force Special Operations Command (AFSOC), and 8th EIS. Vermeer is the first Mixed Reality & AI enabled tool of its kind that allows an operator to easily, through the use of intuitive gestures and 3D visualization, conduct mission rehearsals for autonomous systems in a mixed reality environment. The software suite also allows for the autonomous execution of those missions as well as the 3D visualization of the sensory data generated from the mission.

"We are thrilled to bring a more intuitive and sophisticated solution to the warfighter for intelligence, surveillance, and reconnaissance missions," said Brian Stream, Vermeer's CEO. "We have only been working with the DoD for the last year and a half, and to have won 5 contracts in that short time frame - shows how impactful our solution is. When we first started working with the DoD last year, we won two Phase II SBIRS - one with AFRL and one with AFSOC. Now to have won two follow-on Phase II SBIRS with those partners is thrilling. We are also excited to welcome the 65th EIS as our new partner with this recent OTA win."

While the Air Force is funding the integration for DoD, Vermeer's current technology in Apple's iOS store enables enterprise customers to pre-visualize drone missions in a virtual world. "We are excited to have the opportunity to pursue this dual use case and partner with leading commercial companies and now the USAF," added Stream, "We see tremendous growth potential in both - and we are just beginning."

About Vermeer
Vermeer is a New York based company that creates an augmented reality and artificial intelligence visualization and command and control system for the warfighter. Vermeer provides a first of its kind solution and was a member of the Air Force Accelerator Powered by Techstars.

About the Air Force Research Lab (AFRL), Air Force Special Operations Command (AFSOC), 8th EIS and AFWERX SBIR Program
AFRL, AFSOC, 8th EIS and AFWERX have contracted to streamline the Small Business Innovation Research process in an attempt to speed up the experience, broaden the pool of potential applicants and decrease bureaucratic overhead.
